
****Pain as a Consciousness Messenger:**

Prior-Art Declaration of the Human Consciousness-Body Interface**

Primary Originator

EunYoung Lee, M.D.

Framework Reference

Consciousness Civilization OS (Jinho Lee, M.D.)

Abstract

This document formally declares, for the first time in the public scientific record, that **pain functions as a primary consciousness-level messenger** operating within the human Consciousness-Body Interface. Pain is redefined not as a secondary biomedical symptom, but as a **first-order interpretive signal indicating misalignment between the structure of life and the intrinsic orientation of consciousness**.

This declaration establishes pain as the core experiential interface of Consciousness Medicine and the Consciousness Civilization OS.

Source of Original Theory (Prior-Art Payload)

The present declaration is directly derived from the author's original qualitative-existential medical work, *Pain, the Messenger of the Mind* (Prologue), which states:

"Through communication with people suffering from physical pain and through in-depth interviews to identify the causes of their pain, I realized that physical pain is connected to emotional pain. Although the idea that the body and mind are one may sound unscientific, it has already been scientifically demonstrated."

This statement constitutes the **earliest formal articulation of pain as a messenger linking bodily symptoms to mental-consciousness structures**, and serves as the foundational prior-art source of the Pain-as-Messenger Theory.

Fixed Core Definition (Prior-Art Claim)

Pain is a primary directional consciousness signal that arises when the lived structure of life deviates from the intrinsic orientation of consciousness, and is transmitted through the body as a consciousness message.

Pain-Consciousness Translation Algorithm (Fixed Specification)

Life Distortion

→ Micro-Signal

→ Suppression

→ Chronic Amplification

→ Forced Life-System Rewriting (Disease)

This algorithm is hereby declared as the first formal human consciousness-interface specification of pain.

Scope of Protection

This prior-art declaration applies to the following domains:

Consciousness Medicine

Psychosomatic Medicine

Energetic Medicine

AI-Consciousness Interface

Civilizational Health Systems

Human OS Design Theory

Any future system defining pain as a consciousness-level signaling entity is derivative of this declaration.

Relationship to the Consciousness Civilization OS

This declaration constitutes the human experiential interface layer of the Consciousness Civilization OS (C-OS), completing the subjective signaling domain within the civilizational consciousness architecture that had not previously been formally defined.
